

Automotive Press Line Safety PLC and Panel Build Solution

- The project's goal was to make operations at a sport utility manufacturing plant compliant with Canadian Standards Association (CSA) compliance mandates by implementing a Safety PLC solution for one press line.
- Brock Solutions assured CSA compliance by designing and programming a Safety PLC solution and integrating it into existing systems. Brock's scope extended to building 30 electrical control panels; and conducting extensive I/O emulation testing off-line to assure customer specifications were met prior to on-site installation.
