

Bakery Production Planning and Batch Control Project

- A bakery with major presence in the northeastern United States operated disparate facilities with disparate scheduling and recipe systems, and manually intense production processes on their bread and roll lines. The bakery's distribution arm covered a wide geographic area, and plans for further growth necessitated that the company integrate their systems and automate their bread and roll production processes.
- Brock Solutions was contracted to design, develop, and deploy a Bakery Production Supervisory Control and Data Acquisition (SCADA) System to provide the technical infrastructure that would support the bakery's continued, long-term growth.
