Bring All Your Systems Together

SmartConnect is a message broker used by many of the world's largest airports and airlines that interprets, manipulates, and routes messages between systems based on configured filters and business rules.

SmartConnect acts as a central messaging hub to interface with each system and relay messages between them, maximizing integration while reducing the complexity of the overall messaging architecture.

- **Unlimited message formats:** Process messages in any format, from any system. These message formats could be IATA, ICAO, or other standard or proprietary formats used by existing systems.

- **Monitor message flows:** Comprehensive monitoring capabilities including live dashboards show the real-time status of each connection, with automatic alerts in the event of an issue.

- **Build history with every message:** SmartConnect appends relevant information while routing messages to the detailed transaction history of each bag, flight, passenger, etc.

Key Benefits

- Maximize integration of disparate systems

- Reduce messaging complexity and cost

- Ensure data integrity

- Allow for highly flexible and configurable message content

- Eliminate per-message charges for data

> "SmartConnect is a valuable tool for both airports and airlines as it centralizes message handling and makes system configuration quick and easy."
